

Uzbekistan Airways organized an excursion for schoolchildren from Specialized Secondary School № 60 in Tashkent

2024 11 January

In the final days of winter vacation, young researchers immersed themselves in the world of civil aviation, boarding aircrafts such as Boeing 787 Dreamliner, Airbus 320, Let-410, and the MI-8 helicopter. The pilot of the Boeing 787 aircraft told children about the aircraft's structure and answered questions from those who have decided to connect their future with the sky.

The schoolchildren visited the hangar of the Uzbekistan Airways Technics maintenance facility, where they had a unique opportunity to observe and learn about the repair and maintenance processes of aircraft.

Such excursions inspire young minds and cultivate interest in the aviation industry for future professionals.
