Important Information for Passengers Traveling to India

2026 2 June

Dear Passengers,

In accordance with the requirements of the authorities of the Republic of India, additional sanitary and epidemiological control measures have been introduced for passengers on international flights.

These measures have been implemented in connection with the enhancement of preventive monitoring following reports from the World Health Organization regarding outbreaks of the disease caused by the Ebola virus in certain African countries, including the Democratic Republic of the Congo and Uganda.

As part of the current requirements, passengers arriving in India on international flights are required to complete a Self-Declaration Form containing travel information, contact details, and health status information.

For the convenience of our passengers, we highly recommend reviewing the form in advance and preparing the necessary information prior to departure.

Download the Self-Declaration Form (PDF)

We kindly draw your attention to the fact that airline personnel may additionally inform passengers about the procedure for completing the declaration and the applicable requirements during the flight.

Passengers are also advised to carefully monitor their health condition and, should any signs of indisposition arise, immediately report this to the aircraft crew or seek

medical assistance upon arrival.

The implementation of the specified measures is strictly preventive in nature and is directed toward ensuring the sanitary and epidemiological safety of international air transport.

We kindly ask you to consider these requirements when planning your travel, and we extend our gratitude for your understanding.
