Nesterov Aviation presentation at Uzbekistan Airways Technics

2021 23 October

On October 21, 2021, in Uzbekistan Airways Technics, Nesterov Aviation, in cooperation with BySky, held a presentation of the capabilities of the Swiss super-universal jet Pilatus PC-24 and turboprop PC-12 NG for the development of regional, service and ambulance aviation in the Republic of Uzbekistan.

The event was attended by the First Deputy Chairman of the Board of “Uzbekistan Airways” JSC Umid Khusanov, Deputy Minister of Transport of the Republic of Uzbekistan Zhasurbek Choriev, representatives of the Civil Aviation Agency, as well as managers and specialists of “Uzbekistan Airways” JSC, “Uzbekistan Airports” JSC and other companies and organizations .

Deputy Minister of Transport Zhasurbek Choriev spoke at the event:

- Thanks to the initiative of the President of the Republic of Uzbekistan, favorable conditions are created in the aviation industry. We support the creation of new operators on the territory of the Republic of Uzbekistan. This will provide an opportunity for the development of civil aviation in our country. We are glad that Nesterov Aviation has taken such an initiative - aircraft presentation. This provides great opportunities for new operators and entrepreneurs.

During the presentation, it was noted that the aircrafts are distinguished by low operating costs and unique take-off and landing characteristics that allow them to land on short and unprepared runways. This gives Pilatus aircrafts access to flights to most of Uzbekistan's airports, about 40% of which are equipped with just such airways.

For the participants of the event, a detailed inspection of the PC-24 and PC-12 NG aircrafts were organized, as well as demonstration flights were carried out, which clearly confirmed the high flight performance and takeoff and landing characteristics.
