

Basic definitions

RATE - the amount charged by the Carrier for transportation of a unit of weight (in this case 1 kg). When accepting cargo for carriage is applied the rate that is active at the time of completing the air waybill (AWB).

FREIGHT RATE - the amount charged by the Carrier for transportation of cargo. This amount depends on the weight/volume/type of the goods.

MINIMUM RATE (MIN) - the cost of shipping in any cases must not be inferior to this amount.

NORMAL FREIGHT RATE (NORM) - the rate applied for the calculation of the cost of transportation of goods up to 45 kg inclusively.

QUANTITATIVE FREIGHT RATE:

45 - the rate applied for the calculation of the cost of transportation of goods from 45 kg to 99 kg, inclusively;

100 - rate applied for the calculation of the cost of transportation of goods from 100 kg to 499 kg, inclusively;

500 - the rate applied for the calculation of the cost of transportation of goods from 500 kg to 999 kg inclusively;

1000 - the rate applied for the calculation of the cost of transportation for goods from 1000 kg and above.

Rules for calculating the volumetric weight

Volumetric (or lightweight) cargo is a cargo the volume of which is equal to exceeds 0.006 m³ (6000 cm³) for 1 kg of gross weight.

When transporting volumetric cargo, fee for carriage is calculated on the basis of volume of cargo. In determining the scope, each package is assumed to be a rectangular prism and the volume of cargo is calculated basing on the maximum length, width and height of each package, and if multiple packs are connected together, then in length, width and height of the ligament. The linear measure of 5 mm or more is rounded to the nearest whole centimetre, and linear measure below 5 mm is not considered.

FOR EXAMPLE: the size of the consignment: is 162.2 cm x of 155.6 cm x 141,4 cm. These dimensions are rounded up to integral values: 162 cm x 156 cm x 141 cm = 3 563 352 cm³. Weight to be paid shall be determined by dividing the cubic volume of the shipment in cm by 6,000. The result is 593,892 kg. The results in kg are rounded and we get the payable weight - 594 kg.

NOTE: In case of exceeding of volumetric weight over the actual (gross), the rate of transportation is determined in accordance with the volumetric weight.
