Approved U.S. Government message for posting on reservation systems and web sites in accordance with required actions for TSA SD1544-26-01 and EA1546-26-01 (As of November 13, 2026)

After November 3, 2026, at 11:59 pm Eastern Standard Time, all people boarding an international flight to the United States must attest (sign a statement) that they have not been present in the Democratic Republic of the Congo (DRC) in the 21 days before boarding a flight to the United States. The overall risk to the American public and travelers remains low.

To reduce the risk of Ebola importation into the United States, U.S. entry for travelers who were recently in the Democratic Republic of Congo (DRC) is temporarily restricted. Travelers, including Americans, who have been in the DRC within 21 days of their flight will not be allowed to board commercial flights with U.S. destinations. All U.S. citizens and U.S. nationals who have been in the DRC should plan to remain outside the DRC for 21 days before entering the United States. This includes all passengers with an intermediate stop in the DRC or on multi-stop itineraries via the DRC regardless of whether they disembark or stay on the airplane.

U.S. citizens and U.S. nationals who have been present in Uganda or South Sudan (and not present in DRC) within 21 days of arrival in the United States must only enter through designated airports for enhanced screening. Non-U.S. citizens/nationals must remain outside of Uganda, South Sudan, and DRC for 21 days before entering the United States. Please review the CDC's information on what travelers need to know about returning to the United States from DRC, Uganda, and South Sudan for the list of designated airports and for health information about Ebola.
